50in x 100ft 8mil Microporous Photo Satin (1 roll)

Another photo paper with premium features that are useful in professional advertising/presentations and trade shows. This satin photographic paper is a highly opaque, quick dry, high quality front and back resin coated media, designed to handle the heavy ink load of wide format printers without cockling or print head crashes. A special backside coating is applied to promote mounting. It is suitable for a wide range of desktop printers and premium applications. Dietzgen Photo Satin gives excellent color saturation for thermal printers using dye or pigment based inks without bleeding or rub off.

Physical Properties:
